Field Service

Get going right away:

- Connect your Honeywell device to WiFi or GSM
- Provisioning Mode on (Goto Setting -> Honeywell Setting -> Provisioning Mode -> Turned ON)
- Start EZConfig app on your Honeywell Android device. (Under Power Tools)
- Scan the barcode
- Let it install, and now you're ready to work

EZConfig installation barcode

When installed on the device

Please pair your device with your profile in this configurator tool

1. In My Account (on the website), please create / define a PIN code
2. On the device, open the MotoScan app, type in your account login (example: your-email@gmail.com) and enter your PIN code
3. The device will now pair with your account and take a license from the license pool.

On the configurator tool (on the website)

1. Go to My Devices. Here you will see your paired devices.
2. Go to Configurations: A default configuration is already made ready for you, if you are happy with that, you do not need to change anything - or you can: Add new configuration, build up the configuration with your needed functions, Choose the connection type, Build the menus and workflow, Save the configuration
3. Go to My Devices: The device has selected the default configuration. Change it if needed
4. Start using the scanner to capture data

If you have further questions, please look at the FAQ at the website, or send us an email: info@moto-scan.com
